

Bathroom General Cleaning and Maintenance

Regular cleaning of your Henry Brooks bathroomware products is recommended and will help to avoid the build-up of dirt and grime that can damage and reduce the life of the product.

To keep the product in good condition it is recommended that residual water spots should be removed from all surfaces after each use. This can be achieved by using a soft squeegee or sponge.

For tougher stains or grease build up a solution of mild soap and hot water should be used with a soft cotton or microfibre cleaning cloth.

To protect your product cleaning solutions that contain the following should be avoided:

- Abrasives
- Alcohol
- Ammonia
- Acid or alkaline
- Bleach
- Citrus
- Harsh chemicals and disinfectants
- Peroxides
- Solvents

Carefully read all instructions of cleaners before applying to product surfaces

Many bathroom cleaners may contain chemicals that could adversely affect the finish so should only be used with caution at the consumers risk.

Recommended cleaning procedures:

Acrylic surfaces (shower trays, wall liners, baths and spa baths)

To clean acrylic surfaces, use non-abrasive soap and water or a mild detergent. Abrasive products, such as Liquid Jif, are not suitable. It is recommended that the product surface is wiped dry after each use to prevent the build-up of soap and scum.

Glass (shower doors etc.)

Glass is porous, and this provides an ideal surface for grime to adhere. This can result in permanent staining of the glass.

It is recommended that the glass surfaces are rinsed with hot water and then a squeegee or dry towel is used to dry the glass after each use.

Aluminium extrusions (shower door frames)

Regular wash down the aluminum extrusions with a solution of warm water and mild soap to prevent the build-up of grime. Grime build up retains contaminated moisture which can result in a chemical attack of the surface over time.

Toilets

Toilet cleaners should be used at least once a week. Use a long-handled brush to clean the rim holes and to clean as far into the trap as possible to prevent mineral deposits from forming. The seat and cover and hinges should be cleaned using warm soapy water or a mild detergent.

Most toilet cleaners are not harmful to the vitreous china surface of the toilet pan, however Bathroom Direct does not recommend the use of any cleaning or freshening products which are submerged in the cistern as the acids contained within the cleaner will prematurely deteriorate gaskets and valve parts and will void your warranty.

Please follow the toilet manufacturer's instructions carefully.

Tapware

Clean the surfaces with mild soap and warm water, rinse thoroughly with warm water and then wipe dry with a clean soft cloth.

Allow water to evaporate on metal will form water deposits. It is important to use a dabbing action to dry metal, not an abrasive rubbing action.

Vitreous China basins and vanity tops

To clean vitreous china surfaces, use non-abrasive soap and water. It is recommended that the product surface is wiped dry after each use to prevent the build-up of soap and scum.

Polymarble vanity tops

To clean polymarble cast vanity tops use non-abrasive soap and water. It is recommended that the product surface is wiped dry after each use to prevent the build-up of soap and scum.

In the event of light scratches in the surface of the top a mild abrasive, such as "Meguiars Mirror Glaze 28 All Metal Polish" can be used to polish them out.

Vanity cabinets (paint and melamine surfaces)

The material used in vanity cabinets is water resistant only, not waterproof. Care must be taken to clean up all water spillages onto the vanity cabinet surfaces. To maintain the finish on your vanity cabinet, clean with mild soapy warm water and then dry with a clean soft cloth.
